Recertified Gas Assist Molding Equipment

Save up to 50%

NitroJection's Recertified Equipment line is the most cost effective approach for injection molders to implement gas assist technology for the first time or to expand their current equipment capacity. Many popular gas assist models from Alliance, Bauer, Cinpres and Gain Technologies can be purchased with savings up to 50% off the cost of a new system. Our recertified line includes equipment acquired through trade-ins, direct acquisition, or bought at auction. The incoming equipment is thoroughly inspected, pressure checked, calibrated, and repaired as required to perform to their original specifications. In some cases, options will be installed to improve the original performance. Shown below is one of our currently available gas injection systems.

Ready to Ship by NitroJection

Original Manufacturer Gain Technologies
Model GT-SR-V-A

- Two Tescom ER 2000 gas injection valves
- Allen Bradley PLC & Operator Interface
- Internal Booster & high pressure receiver(s) stores nitrogen to 9,000 PSI
- 8 stages of gas injection pressure & times
- Requires 110 VAC, 100 PSI air and 500 PSI minimum nitrogen supply
- 24 Pin Connector for IMM signals
- Control outputs for hydraulics and spillovers

2- Complete Systems Available as Shown
