

Recertified Series Gas Assist Controllers

Save up to 50%

NitroJection's Recertified Equipment line is the most cost effective approach for injection molders to add gas assist technology for the first time or to expand their current processing capacity. Many popular gas assist models from Alliance, Bauer and Cinpres can now be purchased with savings up to 50% off the cost of a new system. Our recertified line includes gas assist controls acquired through trade-ins, direct acquisition, or bought at auction. All of our recertified equipment is thoroughly inspected, pressure checked, calibrated, and repaired if required. They are then recertified to perform to their original specifications. In some cases, new options will be installed to improve the original performance. Shown below are just a few systems currently available for immediate purchase. All models include a 90 day limited warranty and can be serviced by NitroJection electrical and mechanical technicians.
